InfoMine & IC-FinEval Link Up on Software for Financial Evaluation of Mining Projects

InfoMine and IC-FinEval are pleased to announce the launch of a partnership which will make available to InfoMine's worldwide audience IC-FinEval's unique, state-of-the-art software for the financial evaluation of mining projects and an associated online professional development course.

InfoMine is the leading provider, aggregator, integrator and syndicator of mining information worldwide, delivering content both remotely and via its Portal Site and Business Center on the Internet at www.infomine.com.

IC-FinEval, is an Imperial College London, UK, spin out company which develops and provides reliable, easy to use financial evaluation, risk assessment and decision making software. For details please see www.ic-fineval.com.

The project evaluation software tool, IC-MinEval, was developed at the Royal School of Mines, Imperial College London, UK over a four year period. It arose from close contact with professionals attending its Continuing Professional Development programmes and is the result of a collaboration between mining, financial and programming experts. While being significantly less expensive than competing systems, IC-MinEval produces high-quality financial models for mining projects, enabling its users to make better decisions in less time and at significantly lower cost. It can now be purchased easily through Infomine.

Additionally, a comprehensive and self-paced online fully certified course entitled "An Introduction to Modelling Project Finance" utilizing IC-MinEval input and output is available on EduMine (www.edumine.com), the professional development division of InfoMine.

InfoMine and IC-FinEval are confident that this important new initiative will be highly beneficial to the mining and mining service communities that both serve.

For further information on IC-MinEval and a complimentary case study showing its power and versatility and the associated online course, please see <http://www.infomine.com/ic-mineval/>.
